

Science Grade 10

BSCS SCIENCE: AN INQUIRY APPROACH LEVEL 2

BSCS Science: An Inquiry Approach is a three-year program in the sciences for high school. This program introduces students to the core concepts in inquiry, the physical sciences, the life sciences, and the earth-space sciences, and provides high school students with a rigorous, coherent alternative to the traditional sequence of biology, chemistry, and physics. When students complete all three years of the program, they will have been introduced to all of the national standards for grades 9-12.
